# **ENERGY MANAGERS ASSOCIATION**

Energy Management Theory Combined with Real World Applications

## **COURSE OVERVIEW - VIRTUAL DELIVERY**

Course Title	ENERGY MANAGEMENT IN BUILDING SERVICES			
Course Aim	Energy in buildings is consumed in a large variety of ways and on a large number of different processes and types of equipment. This course aims to give participants an introduction to many of the most common energy consuming systems found in existing buildings for them to gain a basic understanding of their operation as well as covering some of the basic legislation that may apply in buildings such as MEES, ESOS and SECR.			
Course Description	The course will begin by describing the types of energy used in buildings and the basics of how they may be conditioned, including explaining power factor, how power factor correction works, 3 phase load balancing and voltage optimisation.			
	It will continue with how electricity and gas is consumed in various types of equipment, discussing the main areas of energy consumption and the possible opportunities to change and reduce how energy may be consumed. It will cover heating and cooling systems (including recovery of both), hot water systems, air handling and conditioning systems, lighting and their associated control systems as well as renewable and low carbon generation systems producing heat and power.			
Course Outcomes	<ul> <li>The course will help you to: <ul> <li>Identify the types of energy used in buildings and how electricity may be conditioned</li> <li>Understand heating systems</li> <li>Understand cooling systems</li> <li>Understand domestic hot water</li> <li>Understand air handling and conditioning systems</li> <li>Understand lighting</li> <li>Review control systems for building equipment</li> <li>Understand renewable and low carbon generation systems producing heat and power such as solar and CHP</li> <li>Relate to how maintenance can impact energy management</li> <li>Identify and understand main applicable legislation such as MEES</li> </ul> </li> </ul>			
Course Structure and Features	This course is to be delivered as a 1-day virtual tutor-led session via Zoom.  The course structure outlined below is indicative as some sections may be amended to assure the best outcomes for participants. Participants are encouraged to contribute with their own experiences and examples.  Course Structure  Welcome and Introductions Applicable legislation Energy use in buildings Lighting Heating systems Domestic hot water Cooling systems Ventilation systems (air handling and conditioning) Pumping systems			

## ENERGY MANAGERS ASSOCIATION

Energy Management Theory Combined with Real World Applications

•	Renewable and	low carbon	generation	in buildings
---	---------------	------------	------------	--------------

Using maintenance for energy efficiency

#### Who Should Attend the Course

This course is aimed at those who manage energy use in buildings as part of their job or those who are new to energy management or interested in learning about the use of energy in buildings and ways improve energy efficiency.

As a guide, participants with the following job titles may be appropriate for the course:

- **Energy Trainees / Graduates**
- **Energy Managers**
- **Energy Assessors**
- **ESOS** Assessors
- Estates Staff / Managers
- Facilities Staff/Managers
- Sustainability Staff/Managers
- **Building Managers / Engineers**

### **Prerequisites**

The recommended minimum requirements for admission are:

- Organisation-based experience and a basic knowledge of what energy management systems are typically found in buildings and where to find them. For example, what a heating and cooling system is and what it looks like; or what ventilation and pumping systems are and where to find them in a building or on site.
- If a candidate requires to gain the basic knowledge of energy management systems such as HVAC, lighting, etc, we recommend attending the Fundamentals of Energy Management course first.
- For those whose first language is not English, and who have not undertaken a course of study where the principal medium of instruction is English, certificate of competency in one of the standard language tests (e.g. IELTS, TOEFL) will normally be required.

#### **Further** Information

Post course assessment: After the course, participants will be given an opportunity to complete an assessment to test their knowledge, understanding, and application of the content covered in this course. The assessment consists of a multi-choice test with answers, and participants will have 7 days to complete and submit their answers.

Certification: Participants who complete and pass the assessment will receive a certificate including 6 hours of Continuing Professional Development (CPD) recognition.
